

COSC 316 - Project Proposal

Team Members: Bailey Mawhinney, Kadin Oake, Filip Shakalau

App Name: WeatherWiz

Features:

- Weather app similar to iPhone app
- uses data from weather API
- Displays stats about current weather for a city (temperature, conditions), forecast for later in the day
- List of views for different cities, open into full view on tap
- Searchbar function for looking up cities and adding them to your “Weather Board”
- Switch between Celsius and Fahrenheit
- Swipe Animations
- Lookup nearby weather conditions

Technologies:

- **Swift** for frontend code
- **SwiftUI** for the User Interface implementation
- **Java** for backend code
- **MYSQL** for database to store a user’s information, such as:
 - Username
 - Password
 - Favorite Cities
 - Celsius/Fahrenheit preferences
- **GitHub** for
- An **Open Source Weather API** to gain access to live weather data
